CHAPTER

THREE

DEVELOPMENT INSTALLATION

Note

You should have the following installed and properly configured:

- Python 3.8 or greater
- Pipenv
- Git
- Firefox
- Geckodriver

1. Clone the repo
2. Open your terminal/command-line and `cd` into the directory containing the repo
3. Create a `.env` file and add the following environment variables:
   - `DJANGO_EMAIL_HOST_USER`
   - `DJANGO_EMAIL_HOST_PASSWORD`
4. Create a virtual environment and install the **development** dependencies

```
$ pipenv shell
$ pipenv install --dev
```

5. Run the tests to check if everything is installed correctly

```
# all tests
$ python manage.py test

# functional tests
$ python manage.py test --tag=functional

# non-functional (unit + integration) tests
$ python manage.py test --exclude-tag=functional
```
